

Sterodish

Pre-measured soluble detergent unit
for upright commercial dishwashers

DESCRIPTION

Sterodish is a patent pending powerful chlorinated alkaline solid detergent for use in upright commercial dishwashers. The product has a unique 2 stage release that lasts about 50 wash cycles. The first stage releases detergent immediately with contact with water for the beginning cycles, followed by a second stage, that meters release of the detergent for the balance of the cleaning cycles.

This detergent removes the toughest food soils quickly and completely. Water softening agents in this capsule help control lime in the dishwasher and on dishes, glasses, and flatware, leaving them sparkling clean. STERODISH contains bleach to remove coffee and tea stains.

The unit floats on top of the water in the detergent basin once the detergent is dissolved completely, giving the visible indication of a need to replace the unit.

FEATURES & BENEFITS

ECONOMICAL

- Each unit can be used for about 50 wash cycles
- No need for installation and maintenance of expensive dosing equipment

EFFECTIVE

- Contains chlorine bleach to fight tough tea and coffee stains.*

SMALL & FRIENDLY PACKAGING

- Small sized unit saves space in dishwasher/kitchen area
- small recyclable plastic unit compared to large jerry cans or drums

Easy to use

2 stage dosing system

Unit floats on top of water when needs replacement

Powder detergent
for quick release

Solid detergent
for slow release

* Non-chlorinated formula also available upon request

SPECIFICATIONS

Appearance:	Solid in a plastic cap (small powder layer on top not always visible)
Color:	white
Odor:	faint odor of chlorine
pH (1% sol):	12.8
Packing:	Case of 24 capsules

APPLICATIONS

Suitable for commercial dishwashers with a wash basin/bath.

DIRECTIONS OF USE

1. Scrape food soils away and rinse utensils. Pre-soak flatware and use suitable detergent as per usual procedure.
2. Remove shrink wrap carefully noting there may be a light level of powder on top of the unit.
Tip: remove wrap over the dishwasher basin.
3. Place unit inside the commercial dishwasher basin as far away from the heating element (if present) as possible. (Illustration 1)
4. Wash up to about 50 cycles and replace capsule when it floats to the top of the water. (Illustration 2)
5. Use usual rinse aid in the rinse cycle to reduce drying time and eliminate water spots.
